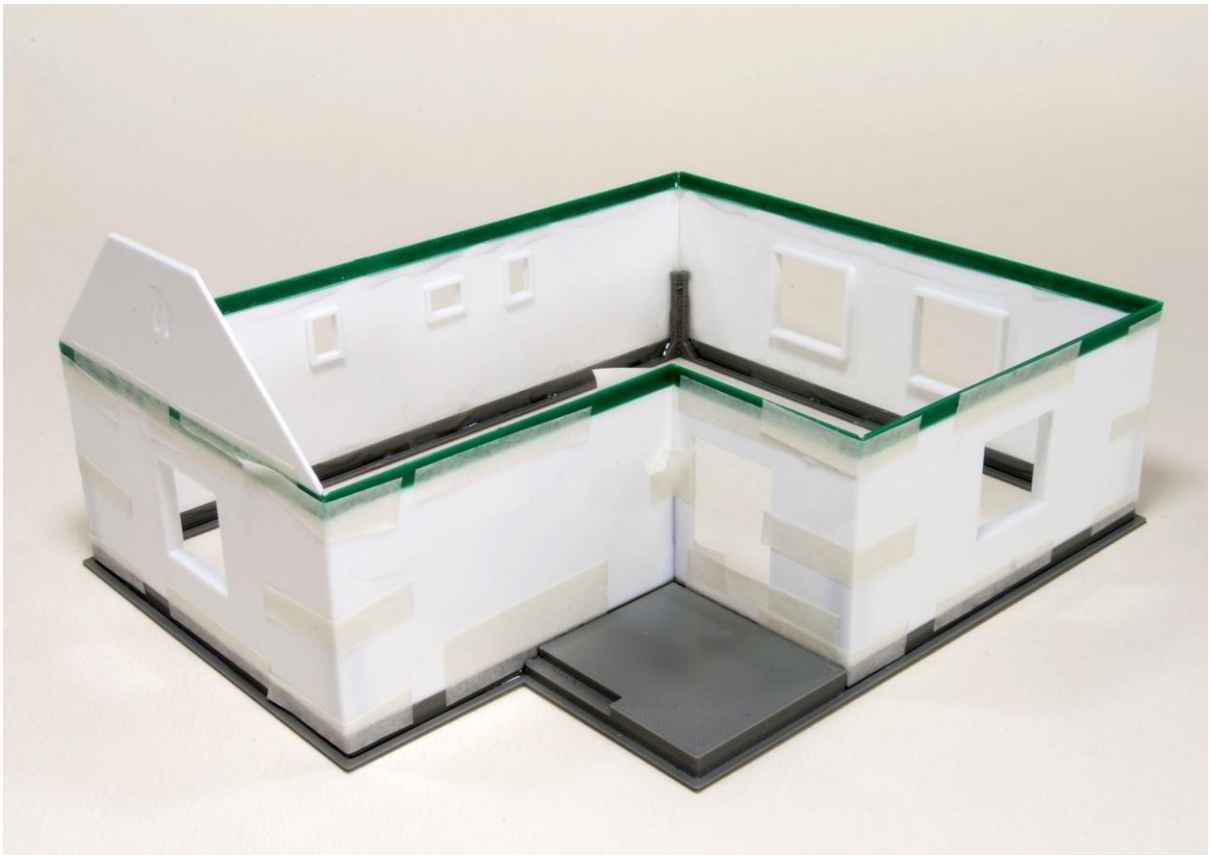
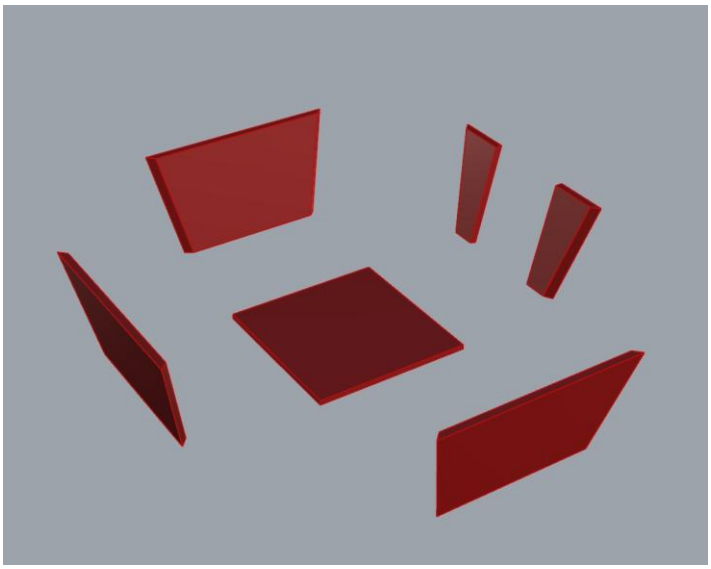
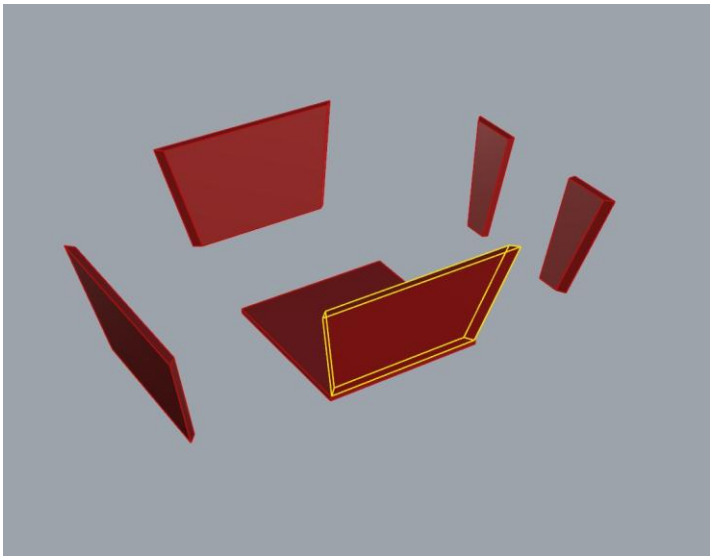
VAMITOOLS Bódé – 436-os típus

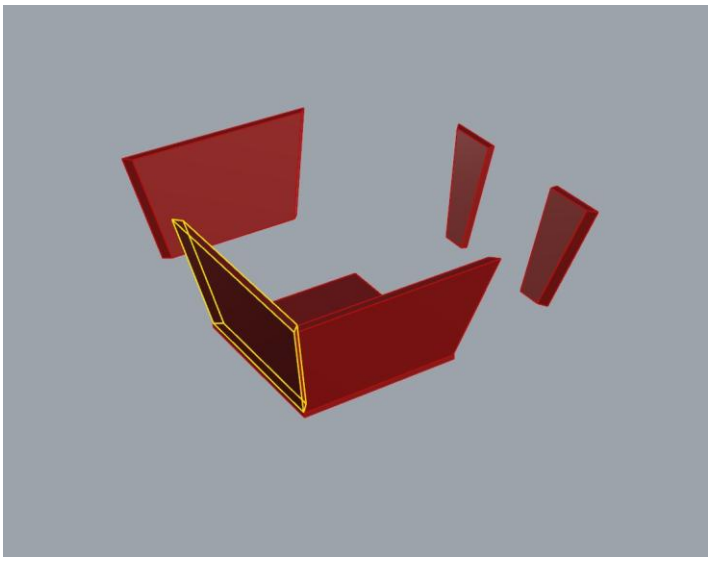
Makettragasztót (Rewell stb.) NE használjanak termékeinkhez, mert az oldószere kárt tehet az egyes alkotóelemekben (főleg a vékonyakban)! A következő ragasztókat ajánljuk: Loctite Super Attack pillanatragasztó, kék tubusos Új Technokol Rapid (acetonmentes), kétkomponenses ragasztó (Epoxy Rapid, Araldite stb.). Bővebb információ a ragasztással, festéssel, anyagtulajdonságokkal, stb. kapcsolatban a minden termék oldalán elérhető általános tájékoztatóban van!

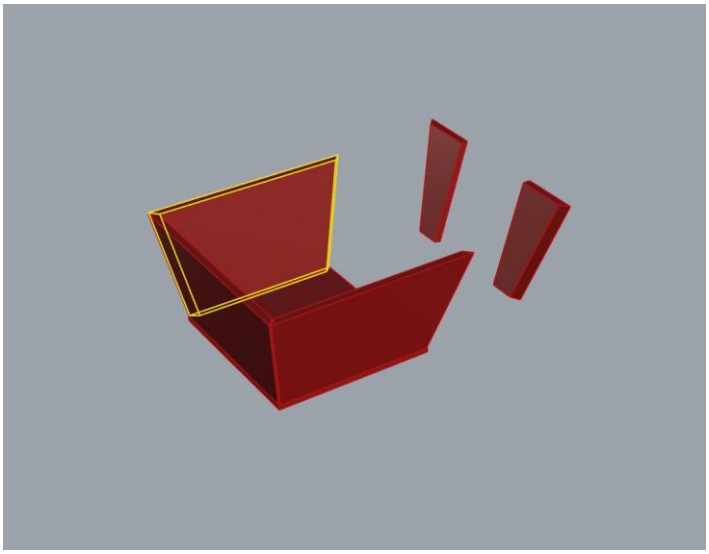
Ragasztási segédletként a falakat ragasszuk össze ideiglenesen az alábbi képen látható módon Scotch Magic- vagy Krepp takarószalaggal, így a falak a későbbi ragasztás során nem fognak elmozdulni. Egy-egy saroknál akár több helyen is megragaszthatjuk a ragasztószalaggal, így még biztosabb tartást kapunk. (A kép illusztráció)

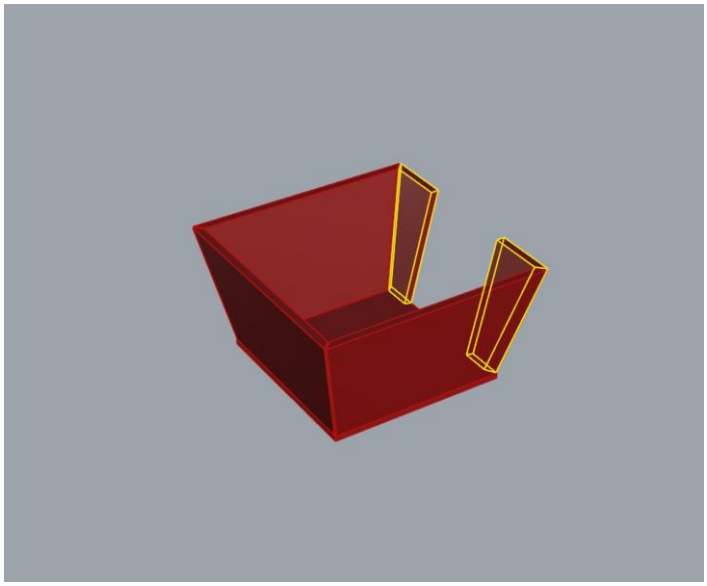


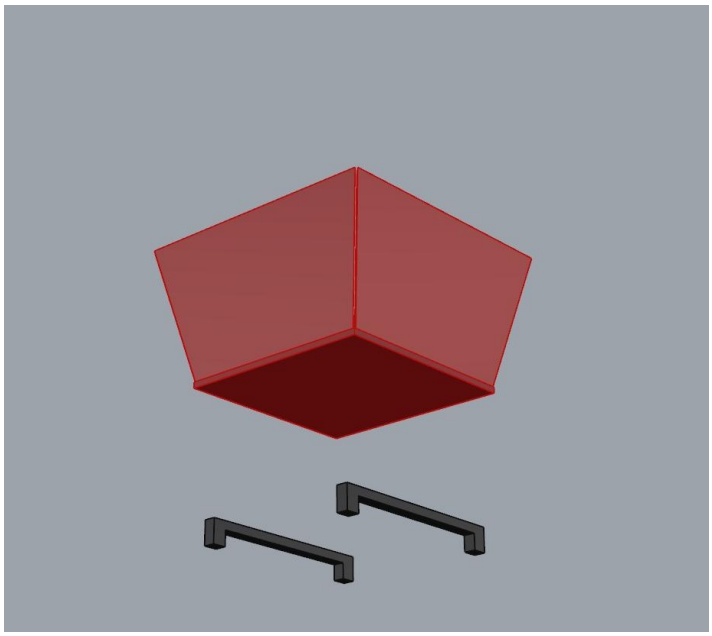


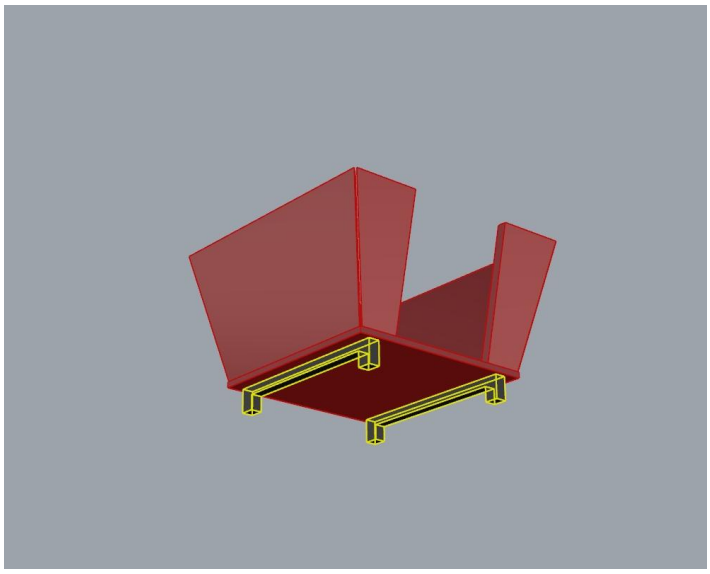


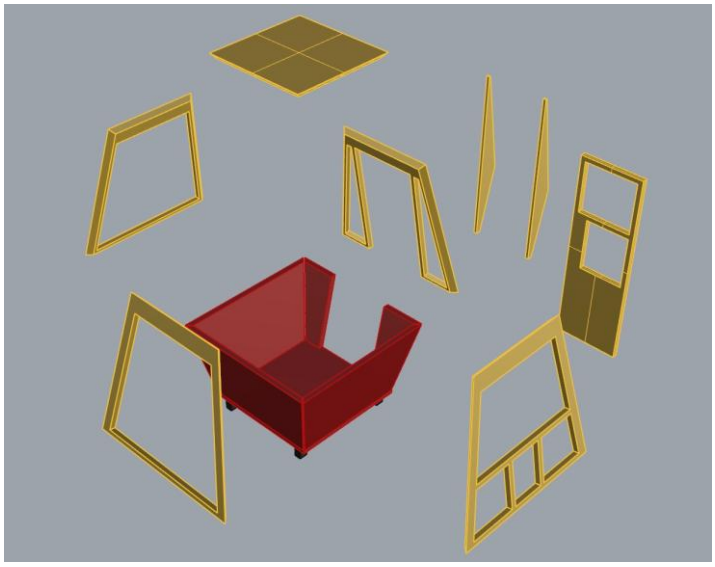


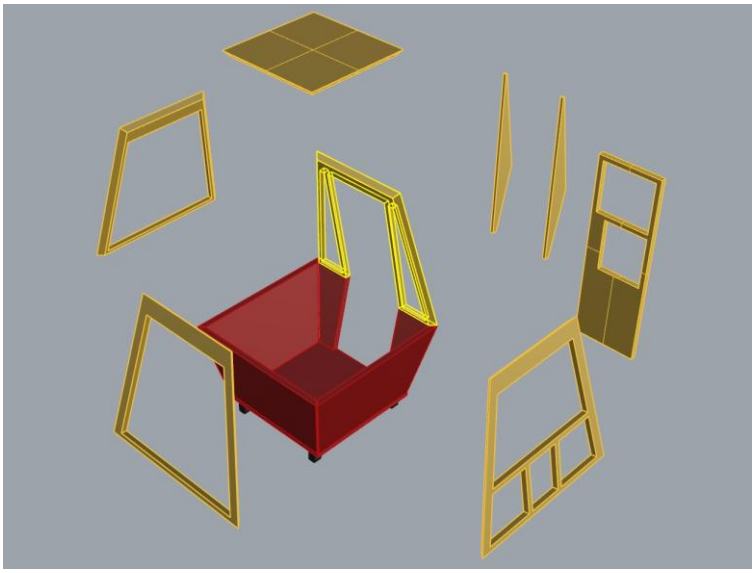


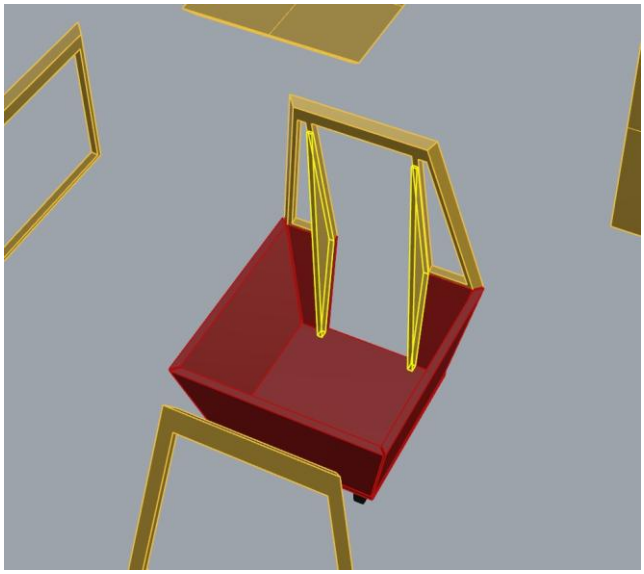


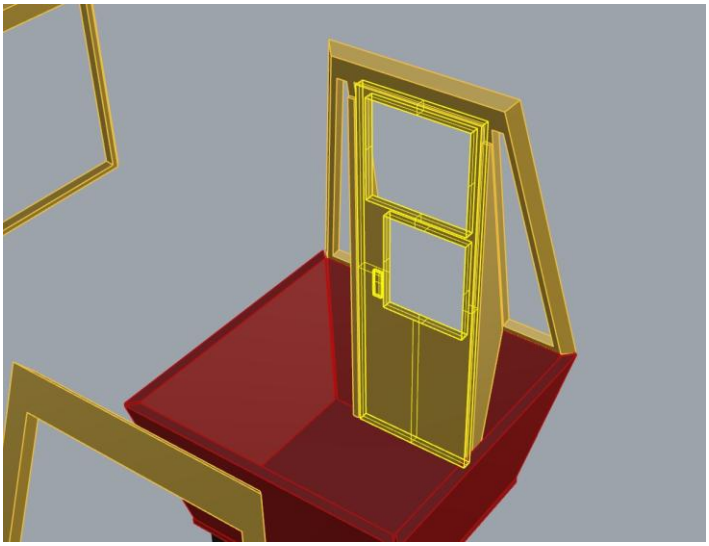


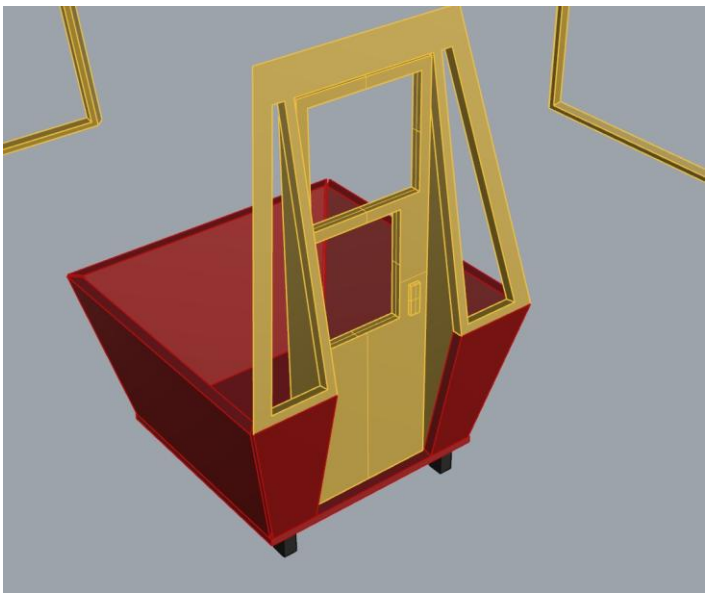


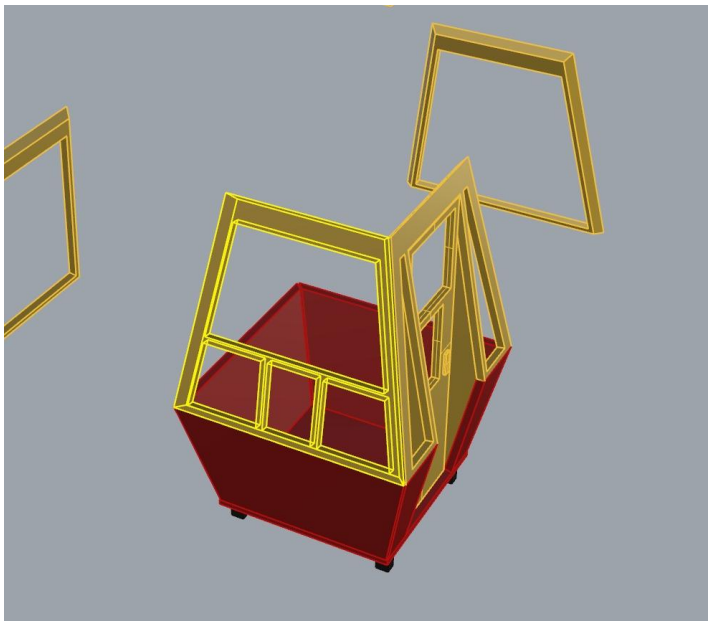


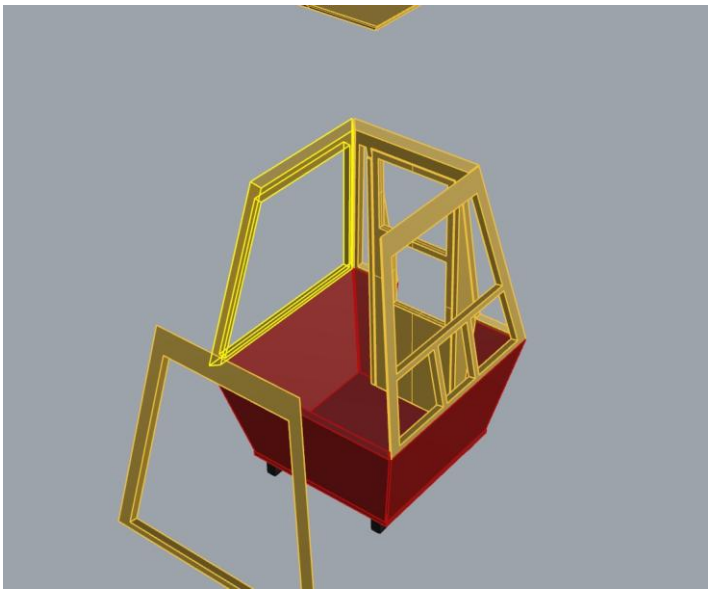


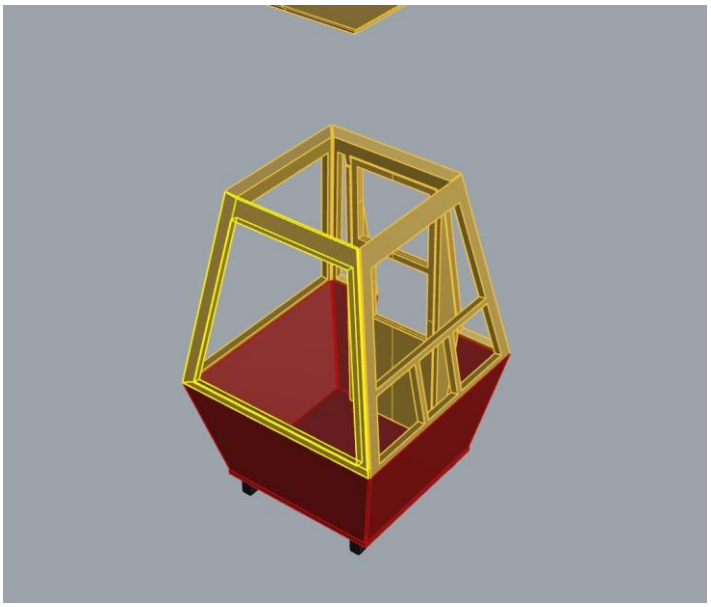


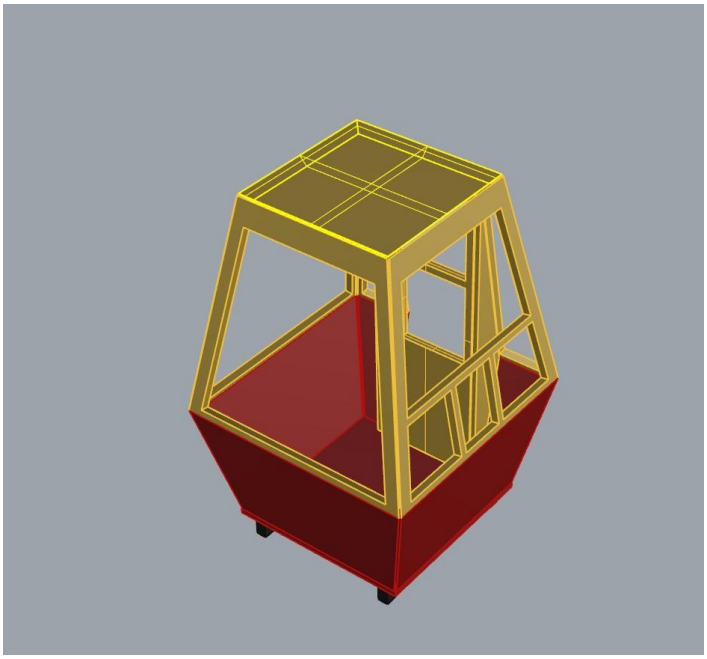


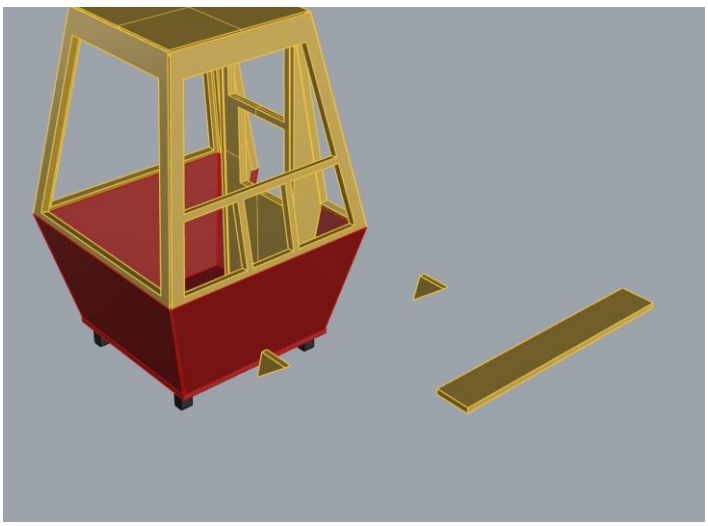


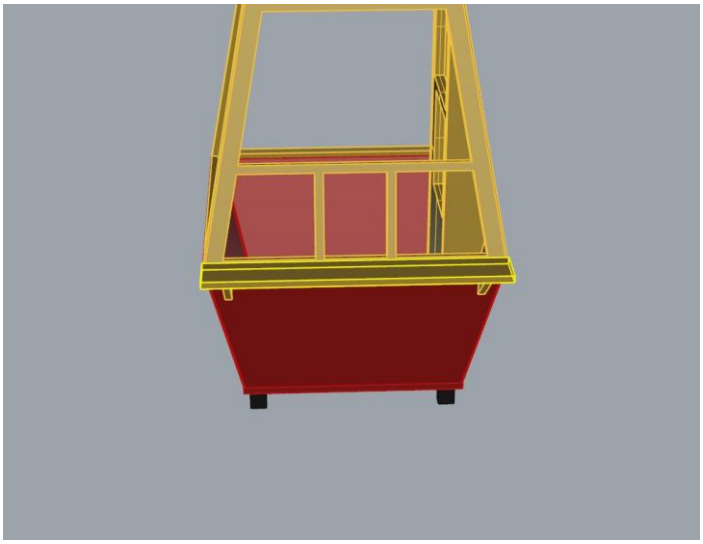


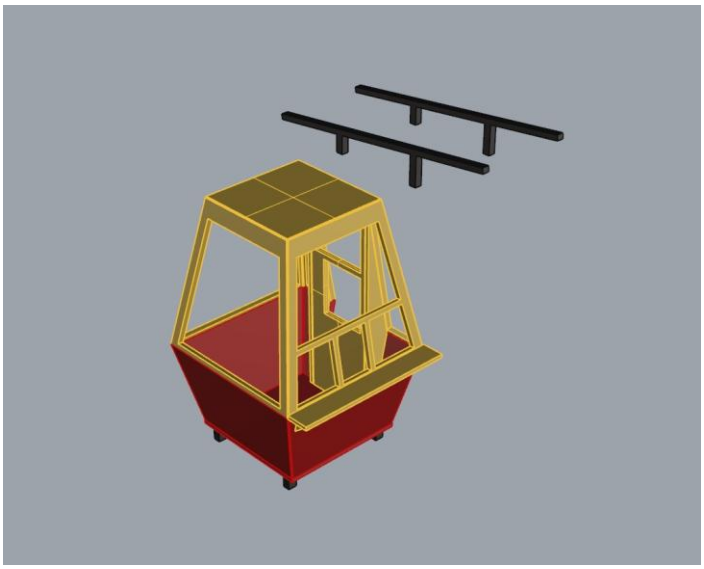


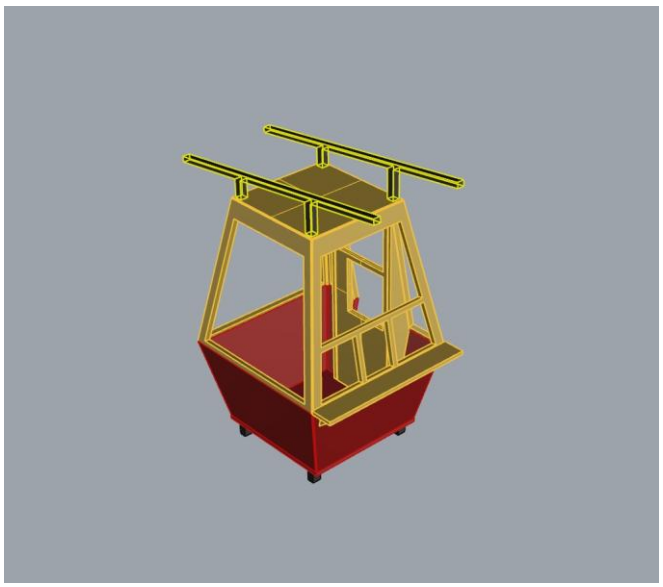


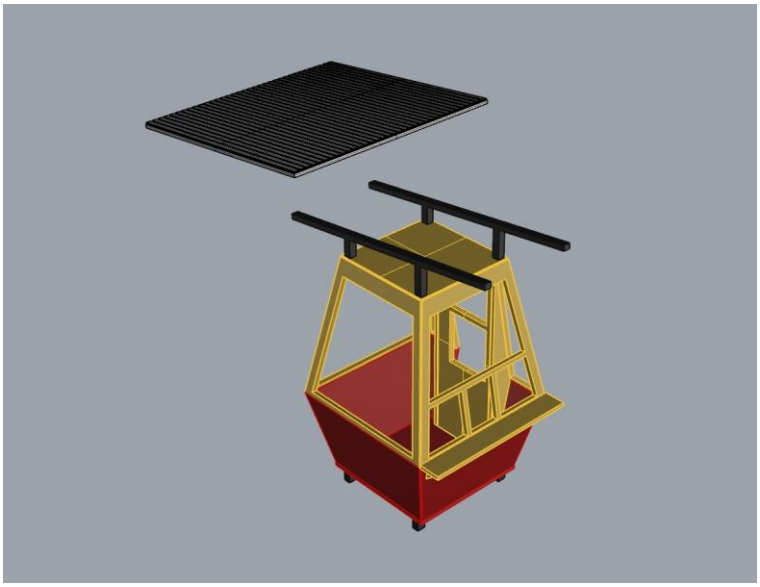


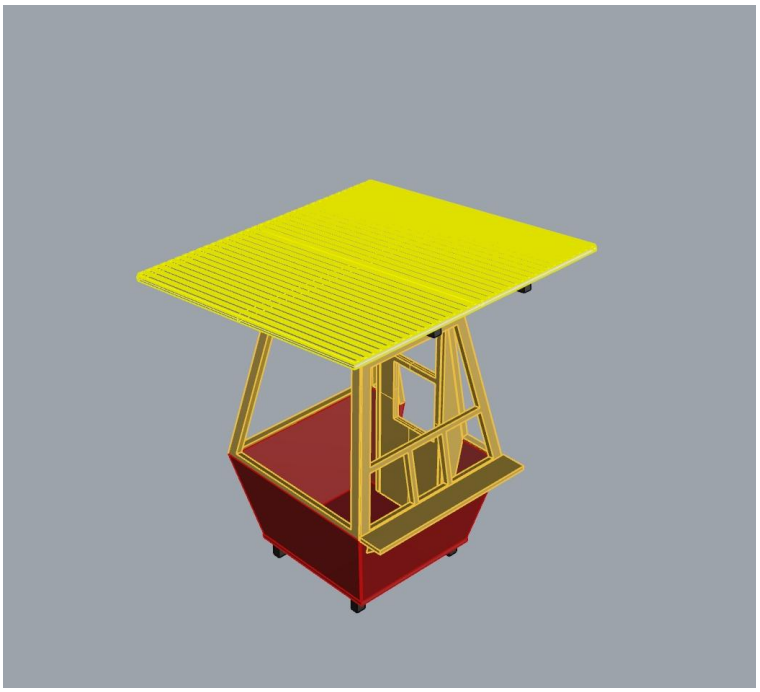












Készen is vagyunk.
